Generate $200K+/year in net revenue for every 1000 CCM enrolled Medicare patients.

Care for your patients between office visits.

Implement quickly with minimal disruption to practice workflow.

Fully compliant with Medicare CCM regulatory requirements and HIPAA.

Prepare now for value-based reimbursement models.

CHRONIC CARE MANAGEMENT CHALLENGE

Chronic Care Management (CCM) regulatory guidelines require extensive investments in people and technology. As such, workflow disruptions often outweigh the benefits of adopting the program. It is costly and time consuming to manage this process without a trusted partner.

RevUp CHRONIC CARE MANAGEMENT SOLUTION

RevUp integrates with athenaPractice to assemble the patient CCM care plan and make it available securely anytime, anywhere. Using the care plan, our care team acts as a trusted extension of the provider to help patients meet their health goals by tracking of medication compliance, patient counseling, relationship building, and early detection of adverse health events.

RevUp includes a smart phone application and an internet portal that support patient engagement. Patient data is acquired through modalities including the RevUp mobile and web applications, remote patient monitoring devices (**RPM**), fitness trackers, and telephonic communication. Collected data is integrated into Centricity to provide a comprehensive view of the patient's health between office visits.

RevUp CCM DIFFERENTIATORS:

- Each enrolled patient receives 20 minutes of proactive personalized non face-to-face care each month.
- Patient provided data is easily collected and monitored, regardless of the patient's technological capability.
- Sophisticated, machine learning techniques mine patient data and discover insights to continually improve our care management approach and patient health.
- Used by ~ 750 providers who care for nearly 1.5 million lives each year.

RevUp REMOTE PATIENT MONITORING

The RevUp Remote Patient Monitoring (RPM) program uses digital devices to collect medical and other health data from your patients and securely transmits that information through the RevUp care management platform directly to your practice.

RPM is a value-add for your practice, providing additional care and attention to a larger number of patients outside the practice, while minimizing the load on your clinical staff and increasing revenue.

The RevUp care management platform integrates with a number of approved RPM devices – bluetooth, cellular, HealthKit, etc. – which transmit health data seamlessly to our system.
