

ezTelemedicine

FOR athenaPractice™

Expand Your Reach and Improve Convenience with ezTelemedicine

ezTelemedicine allows your practice to monitor and triage patients while limiting disruption and exposure, therefore, protecting patients and staff.

ezTelemedicine is a cloud-based HIPAA secure solution that enables you to expand your reach and improve convenience, all while being fully integrated with athenaPractice.

ezTelemedicine can be deployed as an add-on module to the ezAccess Patient Portal or as a stand-alone solution. It is not necessary to replace your current patient portal, yet many practices do so in order to take full advantage of the integration with athenaPractice. All patient data is stored within athenaPractice, whether that be local or hosted by a third-party.

ezTelemedicine works with all versions and configuration of athenaPractice and does not require any special equipment. In most situations, all that is needed is an internet connection and the audio and camera that comes with the device (desktop, laptop, tablet, or mobile phone).

The ezTelemedicine installation is quick. Even new customers can be up and running in just a few days once the VPN set-up and testing is complete.

ezTelemedicine also has the capability of conducting 3-way visits and group visits. If your practice has a patient population that may require a 3rd person (a parent, adult child of an elderly person, or translator) to be on the call from a different location, or a provider to consult with an additional provider or staff member, you may benefit from ezTelemedicine's ability to add a 3rd person to the video visit. ezTelemedicine allows up to 15 people to be on the same video visit if you have the need to conduct group therapy or educational sessions.

ezTelemedicine can also provide an additional revenue stream for your practice.

ezTelemedicine is an affordable and flexible subscription-based solution.

Adoption does not have to be "all or nothing." It is up to your practice to determine how many ezTelemedicine subscriptions are necessary based on clinician adoption.

Quatris Healthco will provide the set-up and training and get your practice ready to offer telemedicine services to monitor and triage patients.
